Door Guard Introduces New Temporary Elevator Door and Wall Protection Systems for Commercial Movers and Furniture Installers

Pittsburgh PA - Door Guard Inc. of Pittsburgh PA launched its new temporary elevator door and interior wall protection systems at the annual InstallNET conference in Las Vegas March 31, 2006 designed to eliminate damage to elevator entryways and interior building walls for commercial movers and furniture installers

Door Guard is a fabricator of patented elevator, wall and door protection systems for use in office building and condominiums. Briane Hartley, President of Door Guard Inc. said, "We have provided temporary elevator cab and door protection customized to a specific elevator for facility managers and building owners for the past 3 years. However, we found our customized Door Liners did not lend themselves to the durability, design flexibility and economic model required of the commercial office mover and furniture installation market.

Hartley elaborated, "Many elevator entryways vary in dimensional configuration requiring a local service provider to invest in 3-5 of our Door Liners to protect the various elevators encountered. By providing our standard Door Liner with several adjustment-spacers the service provider now requires only one Door Liner to fit most any elevator configuration. 3M offered their new Dual-Lock fastener system as a quick, reliable way to attach the 1" and 2" spacers to our Door Liner." Door Guard then laminated the entire Door Liner with a tough acrylic/PVC sheeting material to stand up to the rigors of the commercial office mover.

Door Guard also introduced a new companion product providing temporary wall protection for building interiors called Wall Guard. Hartley said, "It was a natural extension of our product line; but we had to find a way to temporarily adhere the laminated foam panels to any interior building wall without marking or leaving any residual on the wall surface." He said, "We worked with our strategic partner 3M who recommended their new Command adhesive strip. We looked at many two sided adhesive tapes none of which provided the adhesive characteristics of Command and could be removed without any mark or residual on any wall surface including wallboard covered in flat latex paint. Wall Guard was designed to provide temporary wall protection to heights of 40" and 80". The foldable panels are offered in 80" and 60" lengths respectively.

Hartley said, "Door Guard was selected as one of 6 vendors to introduce new products and services at InstallNET's 2006 conference. InstallNET is an association of nearly 200 furniture installation service providers from around the U.S. dedicated to providing professional, quality, and consistent performance.
